Innovations

Renewed Technology

P8 was developed with new-generation technology tools. It strengthens its contribution to digital transformation by combining a user-oriented approach with aesthetic designs.

Quick Support

Support processes are accelerated by providing Panorama users instant chat with the Univera Call Center team.

Quick Setup

Package transitions are automated with e-mail confirmation to accelerate the use of new functions.

Innovations

Communication

The instant messaging feature strengthens the communication system between users.

Ease of Use & UX Improvement

Interfaces that are compatible with all screen sizes provide a consumer-grade user experience. Our analytical framework, developed with real-time data, has been strengthened, so now, more accurate projections accelerate your decision processes.

User Experience

The new interfaces offered in Panorama 8 infrastructure improve the user experience. Having a responsive design increases the ease of use. Through our innovation, we have also improved the visual presentation of data.

Communication Channels

P8 communication infrastructure enables working fast, uninterrupted, and online. It includes a real-time notification system in its .Net Core-based new infrastructure. The infrastructures with added secure mobile communication layer enable lower loads on the servers. The easy-to-follow business process framework is strengthened by providing asynchronous tasks and integration opportunities.

Search Feature

Panorama 8's search feature provides users with quick access to functions. Our feature facilitates easy use for the program, and therefore helps with effective use of time.

Live Support

Panorama 8 offers faster support with its real-time chat feature when users need support.

With this feature, we support the continuity of our customers' business processes.

P 8

Quick Setup

In P8, package transition processes are automated and new functions are offered to you quickly. With the mail approval procedure, checking the use of multiple servers and server efficiency in transitions ensure the smooth and uninterrupted continuation of the business processes.

It reduces your load on your digital transformation experience with its new functions.
